

Adding ReadyRemitSDK via Maven Central

Information

- ReadyRemit SDK Version: 7.2
- Visa Branding Version: 2.0
- Minimum Android SDK version: 26

Step-by-Step Guide

Step 1: Assure you have the Maven Central repository in your project *build.gradle* file, inside the *buildScript* and *allProjects* section:

```
repositories {  
    google()  
    mavenCentral()  
}
```

Step 2: Add the dependencies in your module *build.gradle* file, inside the dependencies block:

```
dependencies {  
  
    implementation "io.github.brightwellpayments:ReadyRemitSDK:7.2"  
    implementation "io.github.brightwellpayments:ReadyRemitVisa:2.0"
```

You need to include the ReadyRemitVisa library to complete transfer flows, otherwise, the SDK will fail.

Step 3: You are ready! Initialize the SDK and start using it.

You can see how to configure ReadyRemitSDK on our [documentation](#).
